

Warm up Task

I can find a half of an amount

Mrs Beazley's dog, Chewy, had 10 biscuits. He was allowed to eat half of them.
How many did he eat?

Chewy had 6 toys. He lost half $\frac{1}{2}$ of them. How many did he have left to play with?

Helpful Hint

Count out the counters or draw the objects

Put them into 2 equal halves. How many are in each half? That is how many he can have.

I can find a quarter of an amount

Mrs Beazley's dog, Chewy, had 12 biscuits. He was allowed to eat a quarter $\frac{1}{4}$ of them.
How many did he eat?

Chewy had 20 toys. He lost a quarter of them. How many did he have left to play with?
What would two quarters $\frac{2}{4}$ be?

Helpful Hint

Put the objects into 4 equal groups and see what is in each group. Can you remember how to draw a bar model or count in groups of 4 on a number line?

--	--	--	--

Only give this a go if you feel like a challenge!!

Go for It! Green challenge

Can you write some fraction questions for your family for thirds? Remember they need to be equal groups. Here are some totals for you to use in your questions

3 6 9 12 15 21
